

CP/M 2.2 Disks and Files

The files **cpm48k.dsk**, **cpm56k.dsk** and **cpm63k.dsk** are disk images of CP/M 2.2 for systems with 48K , 56K and 63K of available RAM respectively.

The file **sysdev.dsk** is a CP/M 2.2 floppy image with the source files and tools needed to edit the BIOS and reassemble CP/M from source.

The **sysdev** folder contains the source files present on the sysdev disk so they can be viewed directly on a PC.

The **supercalc2.dsk** file is a disk image of the supercalc2 spreadsheet CP/M application. It is not a bootable CP/M disk, so boot from a CP/M 2.2 disk in drive A and put supercalc2 in drive B.

The **zork.dsk** file is a disk image of a the popular text adventure game Zork. It is not a bootable CP/M disk, so boot from a CP/M 2.2 disk in drive A and put Zork in drive B.

The **movcpm** folder contains MOVCPM.COM and SYSGEN.COM for Altair (Burcon) CP/M 2.2. The disk images in this directory already include these files, however, if you have an older disk image and want just the MOVCPM and SYSGEN programs, you can retrieve them here. Instructions for using MOVCPM and SYSGEN are also provided in this folder.
